■ Mushroom Business Management & E-Commerce Platform (Mushroom ERP)

Document 09: DevOps, Infrastructure & Deployment Engineering

Project Name: SporeERP
Document Code: DOC-09-DEVOPS
Version: 1.0.0-PROD
Deployment Target: Production Ubuntu 24.04 LTS VPS (Hetzner / DigitalOcean / AWS EC2)
Container Engine: Docker Engine 27+ & Docker Compose v2

1. Production Infrastructure Topology

2. Production Docker Compose Configuration

```
[redacted]
```

---

3. Automated Database Backup & Disaster Recovery Script

A robust backup script running as a nightly cron job on the production host:

```
[redacted]
```

```
# 1. Execute mysqldump with --single-transaction for InnoDB consistency
docker exec "${CONTAINER_NAME}" mysqldump \
  --user="${DB_USER}" \
  --password="${DB_PASS}" \
  --single-transaction \
  --quick \
  --routines \
  --triggers \
  "${DB_NAME}" | gzip > "${BACKUP_FILE}"

echo "[INFO] Backup saved to ${BACKUP_FILE} ($(du -sh "${BACKUP_FILE}" | cut -f1))"

# 2. Sync to S3 (requires AWS CLI configured with appropriate IAM role)
aws s3 cp "${BACKUP_FILE}" "s3://sporo-erp-backups/daily/${TIMESTAMP}.sql.gz"

# 3. Retain only the last 7 days of local backups
find "${BACKUP_DIR}" -type f -name "*.sql.gz" -mtime +7 -delete

echo "[DONE] Backup rotation complete."
```
